

The B2B portal serving car dealerships in making the wholesale purchases.

The main added value are exceptional communication and automated notification feature.

After the opening and configuring the account the dealer starts to get real time notifications about any new car postings that match his interests.

The notifications are sent as by email so as an SMS.

That significantly shortens the “buy-offer-sale” cycle of the car and increases the ROI.

**Realisation:** Software framework Laravel (PHP), Apache, MySQL, Amazon Web Services hosting .
